

Budgify Pre-Launch Testing Plan

Generated April 24, 2026 · Complete this checklist before marketing

1 Authentication

Email sign-up and sign-in

1. Open the app in a fresh private/incognito window. Click "Sign up with email." Enter a real email address and password. Complete sign-up.
2. Sign out. Sign back in with those credentials. Confirm you land on the Welcome screen.
3. Sign out. Click "Forgot password." Enter your email. Open the reset email — confirm the link goes to `budgify.org` (not the Railway API domain). Click the link. Set a new password. Sign in with it.
4. Attempt to sign in with the wrong password. Confirm you get an error and are not logged in.

Google sign-in

5. Open a fresh incognito window. Click "Continue with Google." Complete the OAuth flow. Confirm you land on the Welcome screen with correct name/email.
6. Sign out and sign in with Google again — confirm it recognizes the existing account (no duplicate created).

Guest mode

7. Click "Try as Guest." Confirm the app loads without credentials. Create a budget, add a bill, generate — confirm it works.
8. Confirm guest data is local-only and absent after clearing browser storage.

2 Core Budget Generation

Basic generation

1. Sign in. Enter income of \$1,000/week with next pay date next Monday. Set range to 6 weeks. Add two monthly fixed bills (\$200 rent, \$50 internet). Click Generate.
2. Confirm correct number of weekly columns. Confirm bills fall in the right weeks. Confirm weekly leftover is correct.

Multiple income sources

3. Add a second income source (\$500 biweekly). Regenerate. Confirm the budget anchors to the first pay date and aligns both sources correctly.

Lump-sum debt (future start)

4. Add a lump-sum sinking fund debt, target date 8 weeks from today, total \$400. Set budget start to next week. Regenerate.
5. Confirm weekly line equals $\$400 \div \text{weeks_from_budget_start_to_target}$ — NOT $\$400 \div \text{weeks_from_today}$. The two numbers differ when budget start > today.

Savings goals (future start)

6. Add a savings goal: target \$300, no prior savings, target date 6 weeks from next week's budget start. Set budget start to next week. Regenerate.
7. Confirm weekly savings line equals $\$300 \div 6$.

Yearly and sinking-fund bills

8. Add a "Yearly" bill due in 20 weeks for \$520. Regenerate. Confirm one column shows \$520 lump; all prior columns show \$26/wk sinking fund.
9. Remove the yearly bill and re-add it. Regenerate. Confirm amounts are still correct.

3 Savings Goals

Create and display

1. Open the Savings tab. Confirm the "Manage savings goals" button appears whether or not a budget is open.
2. Create a goal: "Emergency Fund," target \$1,000, target date 6 months out, already saved \$250. Confirm: progress bar at 25%, "Saved \$250 / \$1,000," correct weekly amount, and target date.

Log a contribution

3. Click "Log contribution." Enter \$50. Confirm saved-so-far updates to \$300 and weekly needed decreases.

Edit and delete

4. Edit the goal name and target. Confirm changes persist after navigating away.
5. Click Delete. Confirm two-click confirmation is required. Confirm goal disappears after confirming.

In-budget toggle

6. With a budget open, toggle a goal's "Include in budget." Regenerate. Confirm the weekly line appears or disappears accordingly.

Free-tier limit

7. On a free account, try to create a 4th savings goal. Confirm an upgrade prompt appears.

4

Stripe / Pro Subscription (End-to-End)

Checkout flow

1. Sign in with a free account. Navigate to the Upgrade/Pro page. Click "Upgrade to Pro." Confirm you are redirected to Stripe Checkout — not a Railway URL, not a 404.
2. Use test card `4242 4242 4242 4242`, any future expiry, any CVC. Complete checkout.
3. Confirm you are redirected back to `budgify.org/upgrade/success` — not a Railway domain.
4. Confirm the app shows your plan as Pro within a few seconds.

Webhook verification

5. In Stripe Dashboard → Developers → Webhooks → your endpoint → "Event Deliveries." Confirm `checkout.session.completed` delivered with 200.
6. Confirm the user's `plan` column in the Railway database reads `"pro"`.

Pro features

7. Confirm you can create more than 3 savings goals and more than the free bill limit.

Billing portal

8. From the account page, click "Manage subscription." Confirm redirect goes to Stripe customer portal — not a Railway URL or 404.

Cancellation and downgrade

9. Cancel from the billing portal. The plan stays Pro until period ends — this is correct behavior.
10. To test immediate downgrade: in Stripe Dashboard → Subscriptions → Cancel immediately. Confirm `customer.subscription.deleted` delivers with 200 in Event Deliveries.
11. Reload the app. Confirm the plan shows Free and Pro features are gated.

Refund behavior

12. Refund the Stripe payment. Confirm the subscription is NOT cancelled — refunds and cancellations are independent. User retains Pro until subscription is separately cancelled.

5

Google Sheets Sync

Initial sync

1. Sign in with Google. Connect Google Sheets. Confirm a spreadsheet is created or linked.
2. With a budget generated, click "Sync to Sheets." Open the spreadsheet. Confirm the Main Budget tab matches the app layout.

Savings sheet colors

3. Confirm the Savings tab has correct section header background colors.
4. Remove all yearly bills. Resync. Re-add yearly bills. Resync again.
5. Confirm Savings sheet headers have correct colors — no stale colors from the pre-removal sync should remain.

Incremental sync

6. Change a bill amount. Re-sync. Confirm the spreadsheet reflects the change.

6 Check-In

1. Generate a budget for the current week. Open the check-in dialog for the current week.
2. Enter check-in values for each bill. Save.
3. Reopen the check-in dialog. Confirm values persisted.
4. Confirm "remaining" and "on track" indicators update correctly.

7 Password Reset End-to-End

1. Sign out. Click "Forgot password." Enter your email.
2. Open the email. Confirm the reset link domain is `budgify.org` — not `api.budgify.org` or a Railway domain.
3. Click the link. Confirm you land on the reset-password page in the app.
4. Set a new password. Confirm you can sign in with it.

8 Privacy and Terms Pages

1. On the sign-in page (logged out), click "Privacy Policy" in the footer. Confirm it goes to `/privacy` and displays the policy.
2. Click "Terms of Service." Confirm it goes to `/terms`.
3. Sign in. On the main home screen, scroll to the bottom. Confirm a footer with "Privacy" and "Terms" links is visible.
4. Click both links from the signed-in view. Confirm they navigate correctly.
5. Confirm all email addresses on both pages read `support@budgify.org` (no `privacy@`, `legal@`, or placeholder addresses).
6. In Privacy Policy "Your Rights": confirm it does NOT claim users can change their email or delete their account from in-app settings — both should direct users to email `support@budgify.org`.

7. In Terms "Account Termination": confirm it references emailing `support@budgify.org` , not any in-app settings page.

9 Mobile Responsiveness

1. Open on a mobile device or Chrome DevTools at 390×844.
2. Confirm the sign-in page is usable — logo, form, footer links visible without horizontal scrolling.
3. Sign in. Confirm the bottom navigation bar is fully visible with all tab labels.
4. Generate a budget. Confirm the weekly grid scrolls horizontally without breaking layout.
5. Open the Savings tab. Confirm goal cards stack vertically and are fully readable.
6. Open the check-in dialog. Confirm all fields and buttons are reachable without zooming.

10 Free-Tier Limits

1. On a free account, verify all limits (savings goals, bills, etc.) are enforced with an upgrade prompt — not a silent failure.
2. Verify a Pro account has no such limits or has the advertised higher limits.

11 Data Integrity

1. Create a budget, add bills, generate, close the browser entirely. Reopen and sign in. Confirm budget and bills are still present.
2. Create a savings goal. Navigate away. Return. Confirm it persists.
3. Log a contribution. Refresh. Confirm it persists and the progress bar reflects it.

12 Stripe Webhook — Final Check Before Marketing

1. In Railway Variables, confirm `STRIPE_WEBHOOK_SECRET` is set to the signing secret from your Stripe webhook endpoint (Developers → Webhooks → your endpoint → "Signing secret").
2. In Stripe Event Deliveries, after any subscription change, confirm the webhook fires and returns 200 — not 4xx/5xx.
3. If `STRIPE_WEBHOOK_SECRET` was not set before, set it, deploy, then cancel a test subscription and confirm the downgrade propagates within seconds.

Pass criteria: Every step completes without errors, 404s, or wrong URLs. Stripe webhooks all return 200. Plan transitions (free → pro → free) are reflected in the UI within one page refresh. Google Sheets sync produces correct layout and colors after add/remove/resync cycles.
